

1. Project ID: ITP_NU_06
2. Project Title: IT Service Management system
3. Campus: Northern Uni
4. WD/WE: Weekend
5. Group Information:
Stream:

	Registration Number	Student Name	Phone Number	Signature
01	IT24101455	Tharaniya Jeyapalan	0770502417	
02	IT24101622	Anton Francis Sebon Kanifer	0763576081	
03	IT24102265	Mohammed Asadh Hasan	0769383982	
04	IT24102728	Mohajeevan Ajai	0724746217	
05	IT24103292	Himas M.H.M	0764193445	
06				

6. Client Information / Project Justification
 - A. Project with a Client:

Client Name/ Organization:

Contact Person & Designation:

Email:
 - B. Projects without a Client:

(Briefly justify the selection of the project title.)
7. A brief description of the problem.

In most organizations, schools, and companies, IT-related issues such as software glitches, hardware malfunctions, network problems, and system crashes are usually addressed manually by making phone calls, sending emails, or using paper documentation. This creates a number of issues, including: Delays in problem resolution Ineffective communication between users and IT personnel Lack of effective monitoring of service requests Loss of service request history records It can be challenging to monitor the performance of IT personnel Ineffective management of assets .It service management is inefficient and time-consuming because there is no central system in place. It is hard for administrators to focus on high-priority issues, review performance metrics, and track active issues

8. Main Features of the Proposed System.

	Registration Number (Same order as above)	Name of Feature/s	Brief description of feature(s) in point form
01	IT24101455	User portal(client side)	• User registration & login • Submit service request(software /hardware issues) • Track ticket status • View service history
02	IT24102728	Technician panel	• View assigned tickets • Update ticket status(pending,in progress,resolved) • Upload solution details • View performance dashboard
03	IT24101622	Admin panel	• User management • Technician management • Ticket monitoring • Service category management
04	IT24102265	Ticket management	• Create ticket • Assign technician • Priority level(low,medium,high) • Status tracking
05	IT24103292	Notification system	• Email notifications • Status update alerts
06	IT24103292	Payment	• Service cost calculation • Invoice generation
